Keywords:
Viral hepatitis B, drugs, chemical composition, CN FEA, commodity code

Annotation
The article, taking into account the chemical composition and mechanism of action of some drugs used for hepatitis B, provides information on the development of a new code for them according to the Nomenclature of Goods for Foreign Economic Activity (CN FEA).

Introduction. Despite the efforts of the healthcare system to reduce and effectively treat diseases associated with some viral diseases, a variety of liver diseases occur. Effective treatment of hepatitis B disease [1] today remains relevant to the task . Various synthetic drugs are used to treat this disease. Due to the fact that these drugs are mainly produced in foreign countries, they undergo import-export procedures at customs checkpoints. If the product numbers of medicines are incorrectly determined, difficulties arise in such matters as determining their cost and collecting customs duties [2]. Therefore, it is important to correctly determine the product code based on the chemical composition of any product, including these medications. Earlier in the article [3], we described the results of our research on the classification of some drugs used in the treatment of hepatitis B according to their chemical composition and structure.

Purpose of the work: based on studying the chemical composition and structure of some drugs used in the treatment of hepatitis B, to develop a product code number for them in accordance with the rules of the Nomenclature of Goods of Foreign Economic Activity (NG FEA).

Main part. According to the for Foreign Economic Activity, 2022 edition, for therapeutic or prophylactic use, dosage medicinal products released for retail sale are included in heading 3004. This heading includes medicinal products released for retail sale for therapeutic or prophylactic purposes in the treatment of viral hepatitis.

Table 1.

According to the Commodity Nomenclature of Foreign Economic Activity, as amended in 2022, this is the nomenclature of dosage medicinal products released for retail sale for therapeutic or prophylactic use.

Position	Subpozion	Name
3004	medicinal products (other than goods of heading 3002, 3005 or 3006), consisting of mixed or unmixed products, for therapeutic or prophylactic purposes, put up in dosage forms (including medicinal products in the form of transdermal systems) or in forms or packaging for retail sales:	
	3004 10 000	- containing penicillins or their derivatives, having the structure of penicillanic acid, or containing streptomycins or their derivatives:
		- - containing as the main active ingredient only: penicillins or their derivatives having the structure of penicillanic acid:
	3004 10 000 1	– – – containing as the main active ingredient only: ampicillin trihydrate or ampicillin sodium salt, or benzylpenicillin salts and compounds, or carbenicillin, or oxacillin, or sulacillin (sultamicillin), or phenoxymethylpenicillin:
		– – – other:
	3004 10 000 4	- - - - put up or presented in dosage forms, but not packaged for retail sale
		- - other:
	3004 10 000 6	– – – – containing only streptomycin sulfate as the main active ingredient:
	3004 10 000 7	– – – – others
	3004 20 000	- others containing antibiotics:
		- - other:
	3004 20 000 4	– – – containing only erythromycin base or kanamycin sulfate as the main active ingredient
	3004 20 000 8	– – – others
		- others containing hormones or other compounds of heading 2937:
	3004 31 000 0	– – insulin-saving:
	3004 32 000	– – corticosteroid hormones, their derivatives or structural analogues, containing:
	3004 32 000 8	– – – others
		- others containing hormones or other compounds of heading 2937:
	3004 39 000	– – other:
	3004 39 000 8	– – – others
		- others containing alkaloids or their derivatives:
	3004 41 000 0	-- containing ephedrine or its salts
	3004 42 000 0	- containing counterfeit ephedrine (INN) or its salts:
	3004 43 000 0	- - containing norephedrine or its salts
	3004 49 000	– – other:
	3004 49 000 8	– – – others
	3004 50 000	- other containing vitamins or other compounds of heading 2936:
		– – other:
	3004 50 000 5	– – – containing only alpha-tocopherol acetate (vitamin E) as the main active ingredient

	3004 50 000 6	– – – containing only: cocarboxylase or ascorbic acid (vitamin C) or cyanocobalamin (vitamin V12) as the main active ingredient
	3004 50 000 9	– – – others
	3004 60 000 0	- others containing antimalarial active substances :
	3004 90 000	– other:
		– – other:

Despite the fact that almost 80-90 percent of the drugs used in the treatment of hepatitis B are imported from foreign countries, according to the current nomenclature of goods for foreign economic activity (TN FEA) Republic of Uzbekistan, product code numbers for these drugs have not been developed. In this regard, and taking into account the fact that most of these drugs have hepatoprotective properties, we recommend assigning them a product code and product number indicated in Table 2:

Table 2.

Recommended commodity code numbers according to the Commodity Nomenclature of Foreign Economic Activity for drugs used in the treatment of hepatitis A.

Group	Position	Subpozition	Subheading	Class name
30	Medicines			
	3004	medicinal products (other than goods of heading 3002, 3005 or 3006), consisting of mixed or unmixed products, for therapeutic or prophylactic purposes, put up in dosage forms (including medicinal products in the form of transdermal systems) or in forms or packaging for retail sales:		
		3004 90 000	- others:	
			3004 90 0001	-- other, hepatoprotectors:

Conclusion. Introduction of a new commodity code into customs practice 3004 90 0001, which we recommend for drugs used in the treatment of hepatitis B, allows you to correctly determine customs duties for them and will bring economic benefits to the state treasury.
